

Communication

**Energy Academy Certificate:
30 ECTS + 10 learning activities**

Earn an Energy Academy Certificate from the **Energy Academy** by completing 30 ECTS in Energy in combination with 10 learning activities. This prepares you for your next step: an energy Master or a career in the field of energy!

**share your talent.
move the world.**

ENERGY EDUCATION

At Hanze UAS, you can take an energy track with **27 programmes**. This consists of a combination of components from your own study programme, components from other study programmes and **energy learning activities** offered by the **Energy Academy**.

Our energy education is divided into three domains: business, society and technology. You immerse yourself in your own discipline (which always falls within one of the three mentioned domains) and you acquire knowledge outside your own domain and education. With this broad view, as a future professional you will be better able to come up with solutions for the energy issue.

ENERGY ACADEMY CERTIFICATE

Within the partnership of the Energy Academy, the Hanze University of Applied Sciences and the University of Groningen have developed the Energy Academy Certificate. If you have followed an energy route at Hanze UAS and also participated in 10 Energy Learning Activities at the Energy Academy, you will be awarded this certificate. This will enable you to demonstrate that you have specialised in energy aspects of

your field and that you have learned to work in a multidisciplinary way on the energy transition.

Once you have obtained your Bachelor's degree, you can continue with the European Master in Renewable Energy, the European Master in Sustainable Energy System Management or the Master Energy for Society.

WHAT ARE ENERGY LEARNING ACTIVITIES?

The Energy Academy organises a wide range of activities from different disciplines. Such as lectures, debates, master classes and excursions. Stay informed via www.energyacademy.org.
